

PRODUCT DATA

MicroSurface™ 5132

“ENGINEERED SURFACE” VIBRATORY COMPOUND - LIQUID

MicroSurface™ 5132 is a mildly acidic liquid concentrate formulated for scale removal and rapid surface refinement of steel components processed in vibratory finishing equipment. A balanced combination of surface-active agents functions to remove heat treat scale and accelerate surface refinement. **MicroSurface™ 5132** is normally used in a vibratory process to clean and refine steel metal surfaces. It utilizes a two-(2) step vibratory process that is performed sequentially. The second step being a product like **Cerfa-Kleen® 5502** that is used to neutralize **MicroSurface™ 5132** and imparts a rust protective film on the steel parts. The process is carried out in conventional vibratory or centrifugal disc machines. The vibratory media can be any standard ceramic or plastic media.

Use **MicroSurface™ 5132** at full strength is normally recommended for both batch and flow-through applications. Your Houghton Technical Representative may vary this recommendation depending upon media type, the amount of oil or other soil present on the parts, and similar variables.

TYPICAL PHYSICAL PROPERTIES

Appearance	Transparent amber/yellow Liquid
Odor	Acrid odor
Specific Gravity	1.1
pH	3.2
Wetting	Excellent

Houghton International Inc.
